

Aws-Cloudwatch-Rum

Demo by
Bala

Agenda

- ▶ 1. what is rum
- ▶ 2.why we used rum
- ▶ 3.benfits
- ▶ 4.how to configure rum
- ▶ 5. pricing details of rum

What is Rum

- ▶ monitoring web applications with the goal of understanding performance and providing an optimal experience for your users.
- ▶ Because of the number of variables involved:
 - 1.browser type,
 - 2.browser configuration,
 - 3.user location,
 - 4.connectivity

Benfits :

- ▶ Amazon CloudWatch RUM will help you to collect the metrics that give you the insights that will help you to identity, understand, and improve this experience.
- ▶ You simply register your application, add a snippet of JavaScript to the header of each page, and deploy. The snippet runs when your users step through each page of your application, and sends the data to RUM for consolidation and analysis

Available & billing

- ▶ CloudWatch RUM is available now and you can start using it today in ten AWS Regions: US East (N. Virginia), US East (Ohio), US West (Oregon), Europe (Ireland), Europe (London), Europe (Frankfurt), Europe (Stockholm), Asia Pacific (Sydney), Asia Pacific (Tokyo), and Asia Pacific (Singapore).
- ▶ You pay \$1 for every 100K events that are collected.

RUM overview

Overview

List view

Optimize your end user experience

Get visibility into your application's reliability, performance, and end user satisfaction.

Add your application to get started with Cloudwatch RUM.

Add app monitor

Getting started with CloudWatch RUM

Monitor how your end users experience the performance and reliability of your application.

Step 1. Add app monitor

Add your application and get a JavaScript snippet to paste into the header of your application.

Add app monitor

Step 2. Paste snippet

Paste the JavaScript code snippet into the header of your application.

</> Requires work outside of RUM

Step 3. Monitor & troubleshoot

Monitor for performance, page load speeds and errors across user sessions.

Add app monitor [Info](#)

Add your app monitor details to get the Javascript code snippet to paste into the header of your application.

- CloudWatch RUM will gather telemetry data on the performance and reliability of your application, including client-side errors, and user behavior. By default, your application's telemetry data will be stored for 90 days.

Specify details

App monitor information

App monitor name

MonitorMyBlog

A name is between 1-255 characters. Those characters include letters, numbers, or these special characters . - _ / #. Spaces are not allowed.

Application domain

The top-level domain name for which the application has administrative authority.

jeff-barr.com

Example: amazondomains.com

☒ Include sub domains

Configure RUM data collection

Code snippet [Info](#)

To send data from your site to CloudWatch RUM service, you need to paste the code snippet inside the `<head>` application, above any other `<script>` tags.

- i** The web client, downloaded and configured by the Javascript code snippet, uses cookies (or similar) to collect end user data. Before using the code snippet, please see [Data Privacy and Data Protection in CloudWatch RUM](#). [Learn more](#) 

JavaScript code snippet

Paste this code into the header of your application.

 Copy to clipboard

To send data from your site to CloudWatch RUM service, you need to paste the code snippet inside the `<head>` element of your application, above any other `<script>` tags.

```
<script>(function(n,i,v,r,s,c,x,z){x=window.AmazonCloudWatch;
{q:[],n:n,i:i,v:v,r:r,c:c};window[n]=function(){
{x.q.push({c:c,p:p});};z=document.createElement('script');
z.async=true;z.src=s;
document.head.insertBefore(z,document.getElementById('cwrum-script'));
})('cwr','91d0db85-95c0-431a-8e7b-029a49ecffd1','1.0.0','us-west-2','https://d1vz4qmp594gqn.
amazonaws.com/1.0.2/cwr.js',{sessionSampleRate:1,guestRoleArn:"arn:aws:iam::123456789012:role/CloudWatchRUM-Monitor-us-west-2-737674966147-123456789012",identityPoolId:"us-west-2:2743d543-9a12-45fb-9f87-2e6ce31c1e76",endpoint:"https://data-receiver.us-west-2.amazonaws.com",telemetries:["performance","errors","http"],allowCookies:true});</script>
